EXPERT SERVICE

Treadmaster provides a customer focused service from design conception to installation.

The Treadmaster team assists customers in all phases of the project, review of specifications, design review, documentation, manufacturing, quality control, installation and after sales service.

INTEGRATION MADE EASY

1. Cut to fit panels

During design, panel and sheet sizes are defined then machined and/or cut to the approved drawing.

2. Customised Packaging

All our flooring orders are despatched to the customer in a specific vehicle kit.

3. Reduced Waste and Installation Times

Our customers benefit from the supply of pre-cut parts helping to reduce waste. Installation times are reduced as trimming is minimal.

CUSTOMISED SOLUTIONS

Wide range of colours from NCS, Pantone or RAL colour palettes can be matched.

PICTOGRAMS

Pictograms, logos and bespoke designs can be incorporated into Treadmaster Floor Coverings.

Crossrail - London

GWR - England

DURABILITY

The unrivalled durability of Treadmaster flooring makes it one of the most cost effective solutions used in the passenger transit industry. Proven projects such as London's original Routemaster buses have seen the product still performing just as well after 50 years.

London Underground also entrust Treadmaster Flooring for use on their rolling stock; one of the world's busiest metro systems transporting 1.3 Billion passengers a year.

FIRE SAFETY

Treadmaster Flooring is one of the most fire retardant products for passenger transit on the market. It is compliant with UK, European, Asian and US fire standards and has been successfully tested in combination with a variety of substrates.

SLIP RESISTANCE

Coloured speckles throughout the composition of the product enhance the slip resistance of Treadmaster even when wet. The slip resistance of the flooring will remain constant for the lifetime of the vehicle.

EASY CARE

Regardless of the type of dirt or contaminant (e.g. graffiti or chewing gum), Treadmaster remains easy to clean and maintain throughout its lifetime due to its non-porous surface.

TACTILE STRIPS, PHOTO-LUMINESCENT STRIPS, SLATTED & STUDDED PROFILES

Tactile strips provide guidance for visually impaired persons to help facilitate their movements inside and outside the vehicle. Photo-luminescent strips for use as evacuation markers in the event of a main power outage.

LOW LIFE CYCLE COST

Combined with the low maintenance costs, minimal repair and long life expectancy Treadmaster is the most economical flooring - by far.
